**Re: ATCO Pipelines  
Radiographic Weld Inspection**

**Q2 2017 Quarterly Update: 2017-2018 General Rate Application (Proceeding ID 22011)**

Please find the attached quarterly update for Q2 of 2017 of 'Spreadsheet (b)', with regards to ATCO's radiographic weld inspections as requested in the Alberta Utility Commission's information clarity request, received by ATCO on September 29, 2016.

Please note that the following updates were made to Spreadsheet (b) from ATCO's last quarterly submission:

- Added information for all re-inspection and repair projects completed from Mar 28, 2017 to June 30, 2017
- 60 locations (rows) were removed from the previous list, as upon detailed review it was determined either, no re-inspection of the location was required. (ie. original project has been abandoned, removed, or replaced) or the location was accounted for on multiple rows of the spreadsheet and combined to single row (ie. the location was listed multiple times under multiple original projects).
- Estimated number of welds associated with each site was updated based upon information collected during detailed review and re-inspection.

The information contained here within is current as of June 30<sup>th</sup>, 2017. ATCO will provide the next quarterly update to the AUC in Oct 2017 and will be current as of Sept 30<sup>th</sup>, 2017.

Should the AUC request further clarification or desire further information on this matter, please contact the undersigned at 780-420-7225 or by email at [graeme.feltham@atco.com](mailto:graeme.feltham@atco.com).

Sincerely,

A handwritten signature in black ink, appearing to read "GF", with a horizontal line extending to the right.
