

Release summary

An updated version of the eFiling System is being released on June 12, 2021. The focus of this particular release (version 1.06.01) is on minor enhancements and defects.

These release notes provide the details of the release and are broken down into two areas: new features and fixes. The details are grouped by functional areas.

New features

A new feature is a functional change that has been requested and approved to be incorporated into the system.

Description of change

Applications

The Facilities application forms have been modified for specific application types to include a new mandatory contact field and removal of the description for the notice of application. In addition, changes have been applied to certain Rule 007 forms by updating the electric facility ID to be mandatory in some cases and adding or removing questions for specific application forms. All changes have also been applied to the flattened PDF version of the application forms.

A region selector with an integrated map of Alberta has been applied to the application forms. The region selector has been made mandatory for specific facilities application types. Find applications has also been modified to allow internal and external users to look up applications by region.

A checklist application has been developed to accommodate a quick process for both electric and natural gas municipal franchise agreement applications. This includes a new application form, abbreviated disposition process and a system-generated disposition.

A checklist form for independent system operator administrative amendment applications has been implemented that includes a new application form, efficient disposition process and a system-generated disposition.

Dispositions

A visual indicator has been added to the documents and disposition details screens to show when a disposition has been rescinded.

A disposition can now be rescinded by multiple dispositions and a single disposition can now rescind multiple dispositions. All rescinded dispositions are listed on the active disposition details screen. The rescinded by disposition is listed on the inactive disposition details screen.

Registered parties

Registration has been modified to prevent representatives from creating a group of already registered parties after the final closing date.

The statement of intent to participate forms have been enhanced for each division. The Facilities statement of intent to participate form now includes questions about intended participation, and the Rates and Market Oversight and Enforcement forms include issues identification and requested process steps.

Fixes

A fix is a correction to the system where it was producing an error or was not operating as originally designed.

Description of change

Applicants

The applicant contact information can now be changed on draft proceedings.

Documents

The start and end date filter criteria controls on the public and confidential tabs will now load properly after switching tabs.

External website

The incorrect date issued on the external website for dispositions and notices of application from eFiling has been corrected.
